

Improving the Long-Term Outcomes of Traumatic Brain Injury (TBI) Patients

The North Texas Traumatic Brain Injury Model System

Baylor Scott & White Institute for Rehabilitation partners with the University of Texas Southwestern Medical Center and John Peter Smith Hospital to form the North Texas Traumatic Brain Injury Model System (TBIMS), one of only 16 TBIMS centers in the United States.

*It is our patients who can help make
a difference in tomorrow's treatments.*

Demonstrating both exceptional clinical care and innovative research, the North Texas TBIMS is supported by our TBI physicians, including Randi Dubiel, DO, and Mary Beth Miller-Phillips, MD, as well as other physicians on the medical staff at Baylor Scott & White Institute for Rehabilitation. Our goal is to improve the lives of patients and caregivers following a traumatic brain injury.

Baylor Scott & White
INSTITUTE FOR REHABILITATION

About the Study

Physicians and therapists around the country hope to improve the outcomes of their patients after a TBI by following their recovery over a period of 15-plus years. Our investigators are also interested in the communities in which our patients live and the resources available to them during the recovery process.

- Participation is voluntary
- No cost to participate
- Survey by telephone annually
- Health information is secure and confidential

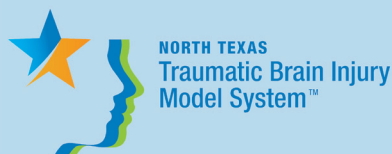

Other research opportunities include:

- Physical activity
- Patient education
- Transition of care
